

TEA & HERBAL INFUSIONS EUROPE

Formerly: European Tea Committee (ETC) and European Herbal Infusions Association (EHIA)

22nd June, 2018

THIE Inventory List of Herbs Considered as Food (Former EHIA Document)

In 2000 the European Herbal Infusions Association (EHIA), the predecessor of THIE, set up the *Inventory List of Herbs Considered as Food*. This list was established because there is an increasing use of products of plant origin, preparations and extracts thereof for food purposes. In the interest of manufacturers and consumers of such products and in the absence of a harmonised frame, Tea & Herbal Infusions Europe has drawn up a list of plants currently employed by the herbal infusions trade in the different European member states as food plants, taking into account the habits, the traditions and/or the regulatory status of plants in different member states.

This *Inventory List* does not claim to be exhaustive and is open for modifications in order to keep it state of the art. Accordingly, regular updates are done and a current version of the list is always available on THIE's website: www.thie-online.eu. In case a plant part is not listed in the inventory this does not automatically mean that this plant cannot be considered as food.

Due to the globalisation of markets and international trade there are growing interests in plant products which may have been traditionally used in certain regions or in particular foodstuffs but are not yet well-known everywhere in the European Union.

Furthermore, there is a continuous development of what is regarded as food. This is especially demonstrated by the history of herbal and fruit infusions: In times of our ancestors, herbal and fruit infusions were well-known home remedies present in most households. They were used for curing all kind of common ailments like a cold or an upset stomach. But with the times the uses of the products changed and due to their pleasant aromatic flavour a lot of them were enjoyed as foodstuffs. Therefore, some plants still have a double function. They may either be used as a remedy or enjoyed as a foodstuff. A well-known example for this double function is camomile. This clearly demonstrates that for a lot of plant products it is not possible to classify them either as foodstuff or as medicinal drug. Therefore, the single product and its concrete way of use has to be evaluated in order to decide whether in this special case the product has to be regarded as a foodstuff or a medicinal product. Taking into account the situation in Europe THIE recommends that certain plant material is only used in restricted quantities in foodstuffs which is indicated in the list by an asterisk preceding the name of the plant. As the special conditions of use of the plant material have to be regarded in every single case no concrete limits can be given.

The list is of great importance because there are different histories of use of herbal materials as foodstuffs in Europe. In case there is a tradition of safe use in one member state or in one region, this indicates that this material may also be used as foodstuff in other parts of the European market. This is confirmed by the general principles of the so-called novel food regulation (Regulation (EU) No 2015/2283; formerly Regulation (EC) No 258/97) and especially article 3, para. 2 a thereof. According to this regulation a foodstuff is not regarded as novel, if the food or the food ingredient has been used for human consumption to a significant degree prior to 15th May, 1997.

THIE's list is a compendium of the different histories of herbal materials used as ingredients in products of the food category herbal and fruit infusions all over Europe. It was started by the German member association Wirtschaftsvereinigung Kräuter- und Fruchtee e.V. (WKF). WKF published its list in May 2000 in the *Deutsche Lebensmittel-Rundschau* (*Deutsche Lebensmittel-Rundschau* 2000 (5): pp 172-

176), a well-known German food journal. A sequence of comments on this list by interested parties followed the publication. In cases of doubt THIE's secretariat provides further details on the different plant materials and their use. This information is useful for companies involved as well as for authorities.

Thus, the THIE *Inventory List of Herbals Considered as Food* is a useful tool for all interested parties and helps to identify plant material used as foodstuff or food ingredient in Europe.

THE INVENTORY LIST OF HERBALS CONSIDERED AS FOOD

English		Latin	German	
Name of the plant	Plant part used	Name of the plant	Name of the plant	Plant part used
* Agrimony	herb	<i>Agrimonia eupatoria</i> L.	Odermennig	Kraut
Alfalfa / Lucerne	herb	<i>Medicago sativa</i> L.	Alfalfa / Luzerne	Kraut
Allspice	fruits	<i>Pimenta dioica</i> (L.) Merr. / <i>Pimenta officinalis</i> Lindl.	Piment	Früchte
Almond	flowers	<i>Prunus dulcis</i> var. <i>dulcis</i>	Mandel	Blüten
Almond	seeds	<i>Prunus dulcis</i> var. <i>dulcis</i>	Mandel	Samen

Plant parts which are approved novel foods in the EU and which can be used as ingredients in herbal infusions according to Implementing Regulation (EU) 2018/1023 of 23 July 2018 correcting Implementing Regulation (EU) 2017/2470 establishing the Union list of novel foods.

If these plant parts are used, the specifications as outlined in table 2 of the aforementioned Implementing Regulation also need to be considered.

English		Latin	German		Commission Implementing Regulation (EU) 2018/1023		
Name of the plant	Plant part used	Name of the plant	Name of the plant	Plant part used	Maximum levels	Additional specific labelling requirements	Specified food category
Chinese hawthorn	fruit	<i>Crataegus pinnatifida</i> Bunge	Weißdorn, fiederteiliger	Frucht	In line with normal food use of <i>Crataegus laevigata</i>	The designation of the novel food on the labelling of the foodstuffs containing it shall be ' <i>Crataegus pinnatifida</i> dried fruit'	herbal infusions
Guayusa	leaves	<i>Ilex guayusa</i> Loes.	Guayusa	Blätter	In line with normal use in herbal infusions and food supplements of a similar aqueous extract of dried leaves of <i>Ilex paraguariensi</i>	The designation of the novel food on the labelling of the foodstuffs containing it shall be 'Extracts of dried leaves of <i>Ilex guayusa</i> '	herbal infusions
Hoary rock rose	herb	<i>Cistus incanus</i> L. Pandalis	Zistrose, graubehaarte	Kraut	Intended daily intake: 3 g herbs/day (2 cups/day)	The designation of the novel food on the labelling of the foodstuffs containing it shall be ' <i>Cistus incanus</i> L. Pandalis herb'	herbal infusions
Noni / brimstone tree / Indian mulberry	leaves	<i>Morinda citrifolia</i> L.	Maulbeerbaum, indischer	Blätter	A cup of infusion to be consumed shall not be prepared with more than 1 g of dried and roasted leaves of <i>Morinda citrifolia</i>	1. The designation of the novel food on the labelling of the foodstuffs containing it shall be 'Noni leaves' or 'leaves of <i>Morinda citrifolia</i> '. 2. Instructions shall be given to the consumer that a cup of infusion should not be prepared with more than 1 g of dried and roasted leaves of <i>Morinda citrifolia</i> .	for the preparation of infusions

Footnotes:

The THIE *Inventory List of Herbals Considered as Food* also shows the Latin plant name for each entry. It is common practice in botany to specify a plant via its full Latin name/scientific denomination which consists of three parts, i.e. the genus plus a species specific epitheton plus the (abbreviated) name of the author who first described the plant in question. Only this denomination allows a clear specification of a plant. For the determination of the Latin plant names given in the THIE Inventory list the following acknowledged plant databases were used as references:

1. Mansfeld's World Database of Agriculture and Horticultural Crops:
<http://mansfeld.ipk-gatersleben.de/apex/f?p=185:3:.....>
2. The Plant List by the Royal Botanic Gardens (Kew), the Missouri Botanical Garden and worldwide collaborators:
<http://www.theplantlist.org/>
3. Taxonomy Database of the National Center for Biotechnology Information (NCBI):
<http://www.ncbi.nlm.nih.gov/taxonomy>

Further resources may have been consulted to identify the correct botanical denomination of a plant if necessary. If two Latin denominations are mentioned in one entry of the Inventory List, the first name is the “accepted name” and the second is an important synonym to it.

- * = Restricted quantity recommended.
- ¹ = According to Regulation (EC) No 1334/2008 the tetraploid form of calamus is not used as ingredient of herbal infusions.
- ² = Including Camomilla setacciata for Italy (i.e. tubular flowers of *Matricaria recutita* L. / *Matricaria chamomilla* L.).
- ³ = Only used in combination with flowers.
- ⁴ = According to Regulation (EC) No 1334/2008 of the European Parliament and of the Council the condition of use for *Hypericum perforatum* is limited to the following: '*Flavourings and food ingredients with flavouring properties produced from the source material may only be used for the production of alcoholic beverages*'.
